## RE: Document on: "Responding to WIFI Safety in our Schools"

Drafted by: Environmental Public Health Washington State Department of Health

Your adherence to the conclusions of the various reports you reviewed regarding WIFI health effects, and your decision to implement policy that would adhere to the conclusions of the reviewed reports defies the very contents of those reports, their author's, the industry interests involved in the formulation of the conclusions, and the negation of factual evidence to the contrary that exists in the real world of wireless and EMFs biological research. That science is robust and historical. If you choose the path of giving your unequivocal approval for this technology in the schools you are opening up yourself to legal challenges that will challenge everyone of your conclusions and assumptions.

**\_"Inconsistent evidence is definitely not the lack of evidence"**

No state or local government should have the conscience or the blanket authority to impose on our state's children a device, technology or toxin that has so many documented biological effects and potential risks and still consider itself to be the guardian to the health of its population. With Wireless industry having such vast wealth and vast propaganda machine in our society we will always be outnumbered with bias science and scientists, with untruths about the true exposure conditions people are living under. For I have over \$5000 dollars worth of RF & EMF sophisticated meters and what you state about WIFI exposure is totally and factually wrong and could be proven in a court of law.

Those of us who find it impossible to live under this umbrella of 24 artificial radiation are not asking that you eliminate wireless for it is like taking away a bone from a dog. All we are asking is that you give Individuals, schools and districts the **CHOICE to choose their own Learning Environment Scenario.** For individuals and societies always live with risk. It is when we force those who do not wish to assume that risk that it becomes unconstitutional and dictatorial.

**One Shoe should not fit all. If a school chooses wired connections over wireless they should be supported equally alongside a wireless school.**

Accommodations in each district for a wired only schools should be encouraged as well. This is the route what many states, provinces and countries in Europe are choosing to do. A route we would be wise to follow based on all the conflicting and dubious information out there on the science of RF-EMF health effects.
